PAAS

Personnel Accountability and Assessment System

What is PAAS?

Personnel Accountability and Assessment System (PAAS) is a web-based enterprise application that standardizes:

- ✓ Personnel Accountability
- ✓ Needs Assessment and Case Management
- ✓ Recovery and Reconstitution Tracking and Reporting

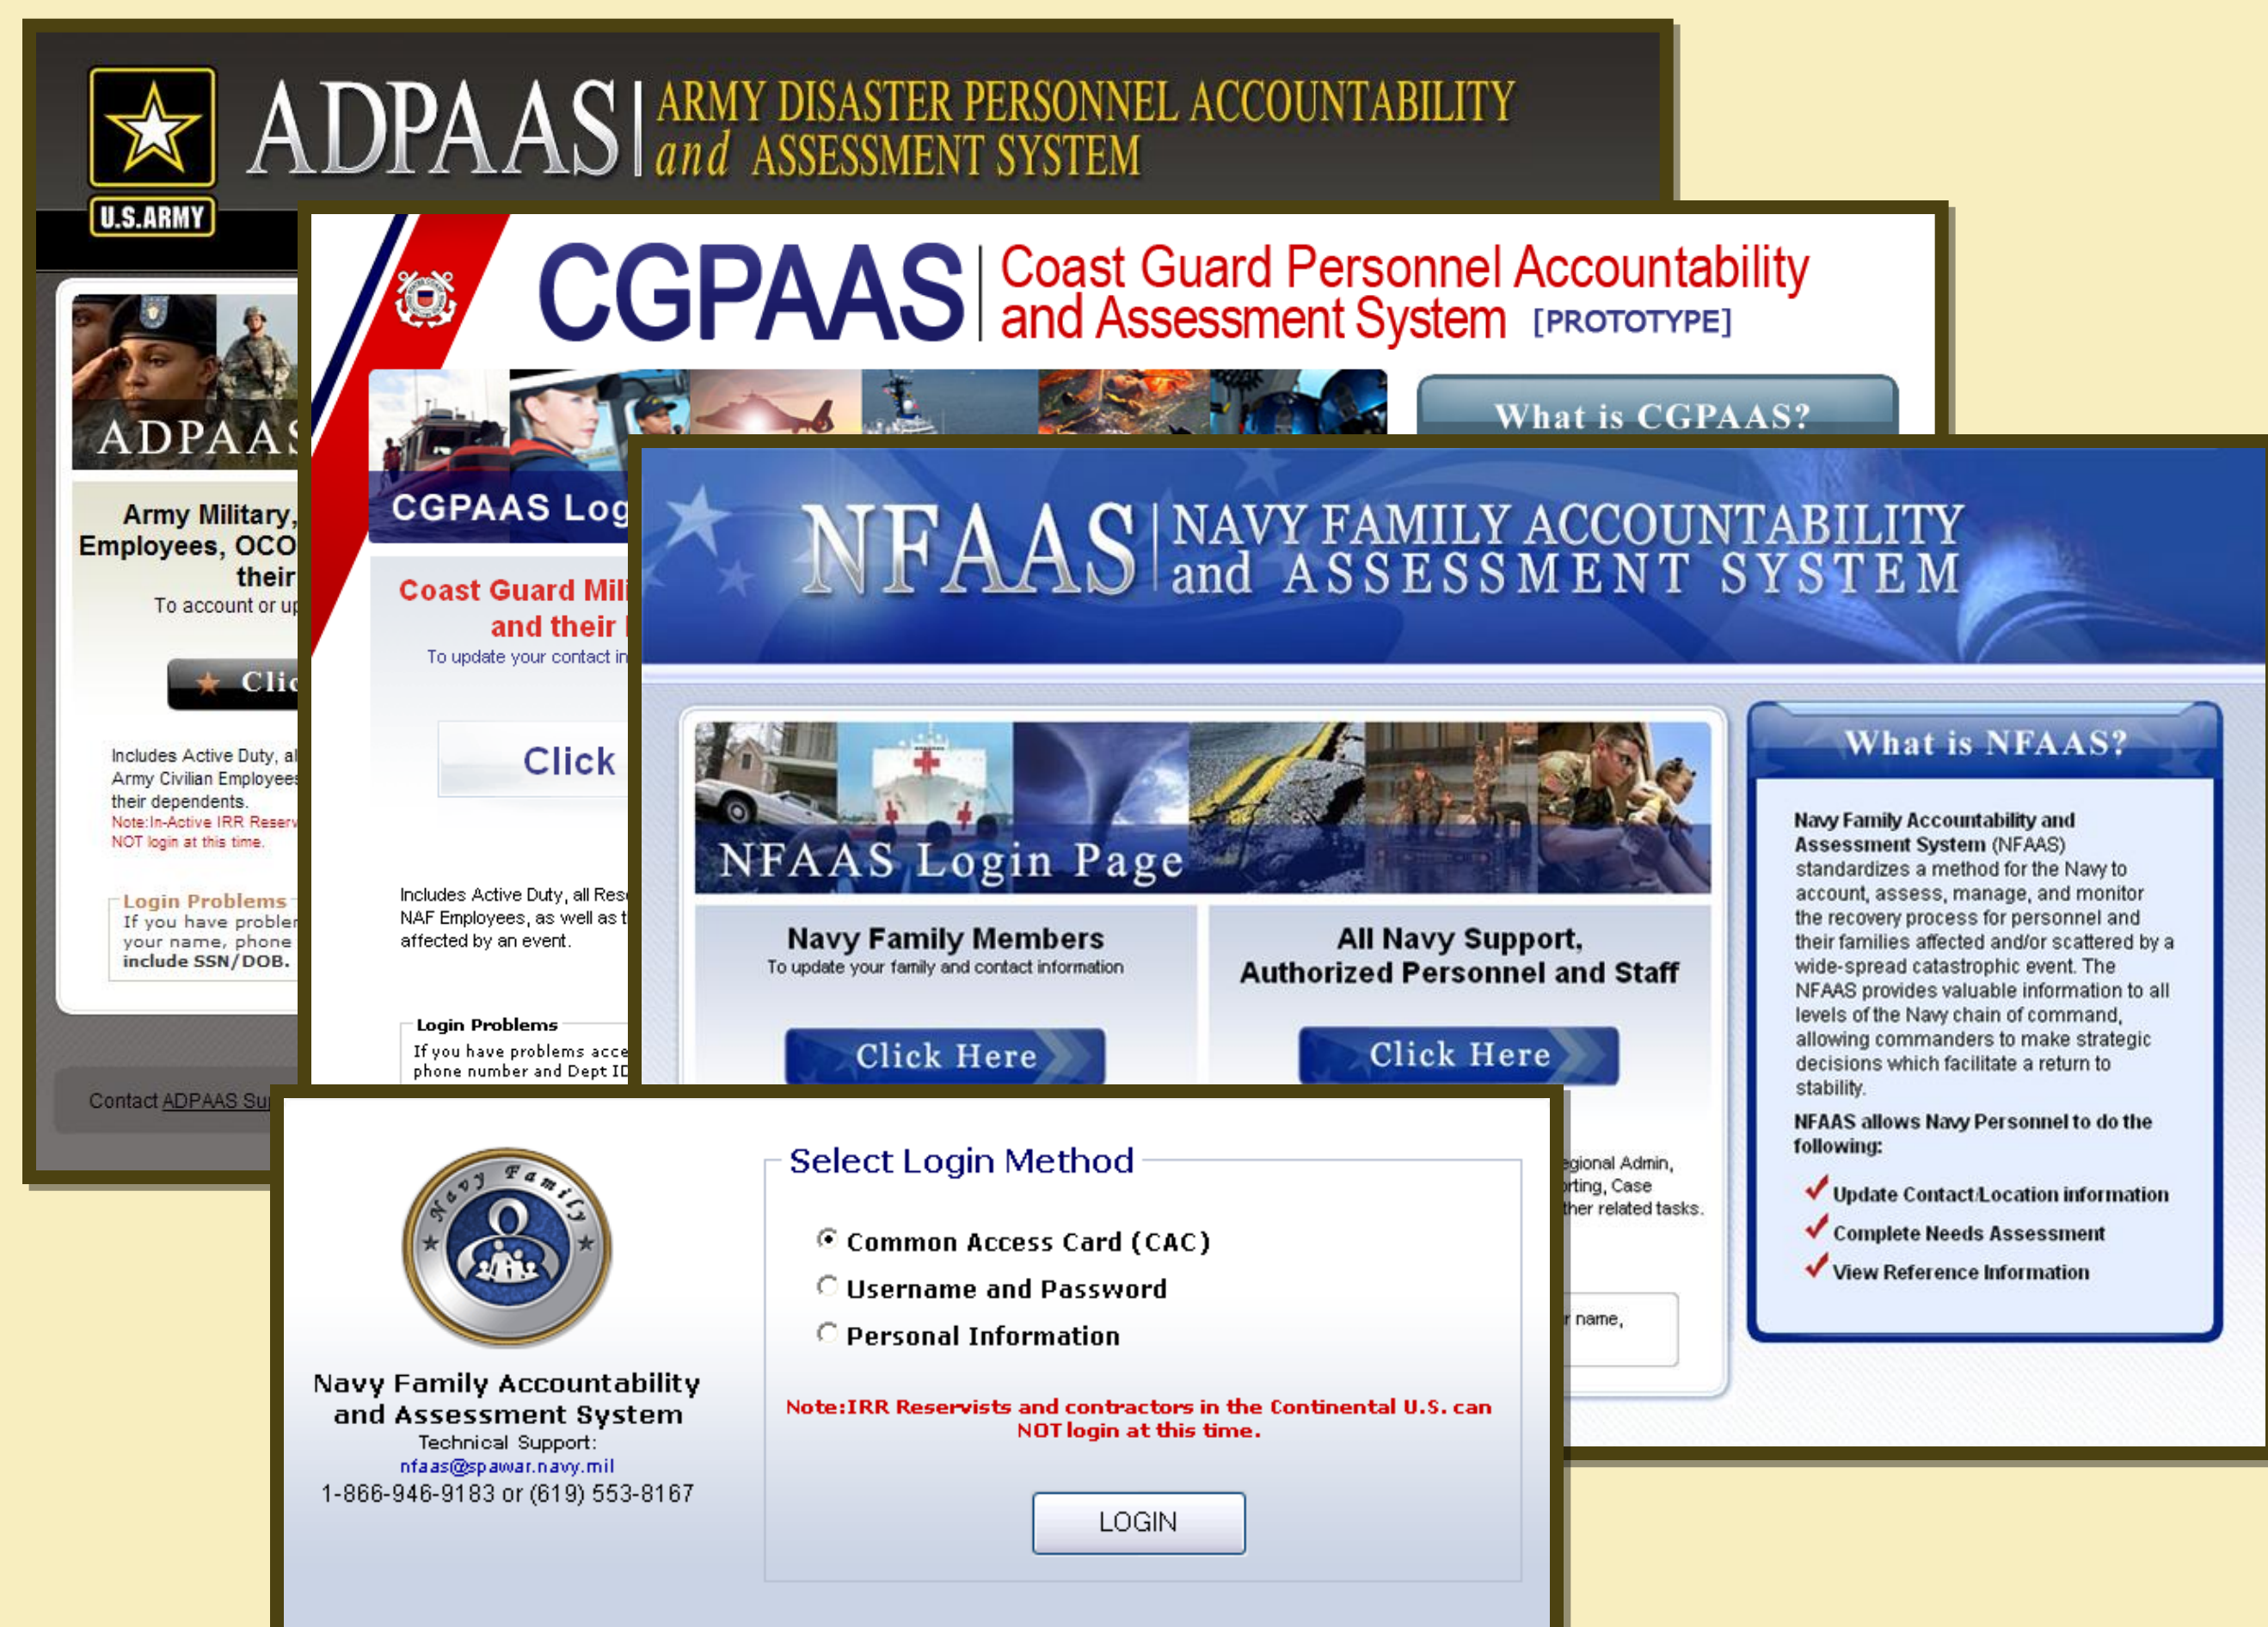

PAAS allows service members, employees, and families affected by a catastrophic event to do the following:

- ✓ Self-Report Accounting Status
- ✓ Update Contact and Location information
- ✓ Complete a Needs Assessment

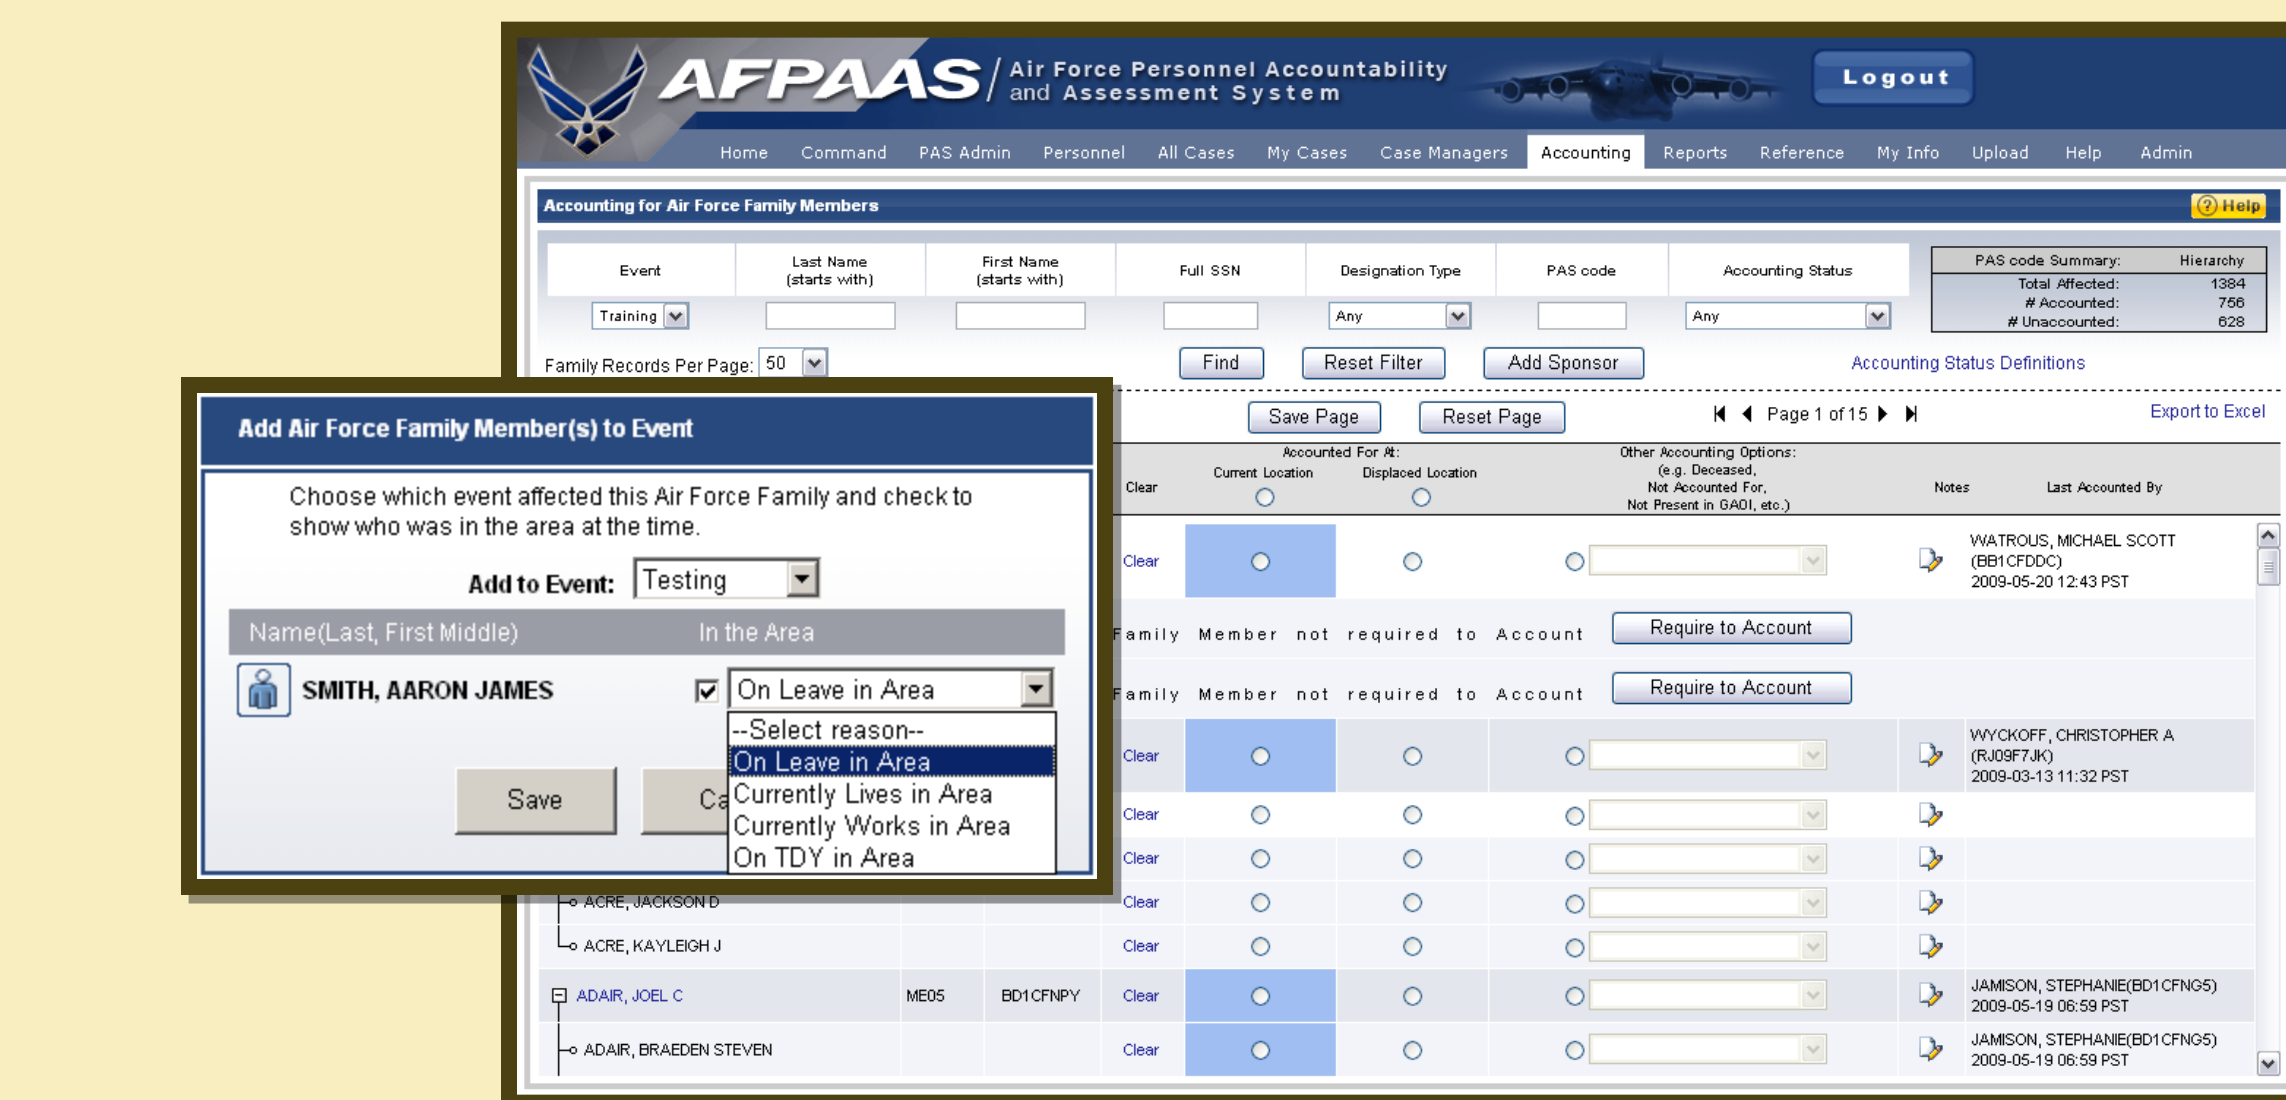

PAAS provides valuable information to leaders so they can make strategic decisions that speed the recovery process:

- ✓ Total and % of people accounted for, by region
- ✓ Hourly accountability total, history and trends
- ✓ Number of people with needs, by category (e.g., medical, financial, temporary housing, etc.)

| TEST_USER_A | 03 | 00465 | Active Duty/TS | PORT HENRIE, CA | | |

History

After the hurricanes of 2005, the Navy established full-spectrum community service operations. However, there was no standardized method for the Navy to:

- Muster and account
- Assess needs
- Manage recovery assistance

PAAS standardizes a method for organizations of any size to muster, account, assess, manage and monitor the recovery process for personnel and their families affected and scattered by a wide-spread catastrophic event.

Widely Adopted

Over the past five years, PAAS has been widely adopted across the Department of Defense and is now in use by millions of personnel in the Navy, Army, Air Force, Coast Guard, and the "Fourth Estate" (non-military DoD personnel). Each organization has contributed, funding new features that *all* have benefitted from.

Features Summary

- ✓ Personnel Accounting (status, whereabouts, emergency contact information)
- ✓ Family Support Registration (needs identification and assessment)
- ✓ Case Management (monitoring, information, knowledge management)
- ✓ Reporting (both real-time and historical)
- ✓ Information Dissemination and Notification
- ✓ Separate, Secure Systems for Personnel and Support Staff (each are CAC-enabled)
- ✓ Meets DoDI 3001.02 Requirements

Hardware Requirements

PAAS runs on configurable suite of PC-based servers which can be scaled to virtually any needs.

Software Requirements

- Microsoft Windows Server 2003
- Microsoft SQL Server 2005
- Apache's Tomcat Application Server
- Axway's Tumbleweed Validation Authority

Detailed Features Description

Event Management

Create and manage multiple events simultaneously, determine affected personnel, and capture metadata about the event.

Accountability

Account for all personnel (by individual, supervisor or other designated person). Both initial accounting and on-going accountability tracking are supported.

Contact and Location Information

Allow personnel to input current location and contact information during an event.

Assessment

Survey personnel after an event to determine any impact on them or other relevant information that can be assigned levels of severity.

Workforce and Individual Case Management

Manage individuals or groups of personnel according to organizational hierarchy to ensure continuity of operations or recovery of personnel.

Reporting

Simple and complex reports, both real-time and historical, are available. Data can be searched, filtered and the results exported in Microsoft Excel format.

Information Dissemination

Home page (for timely, changing information) and a Reference page (for phone numbers, websites, instructions, policies, etc.) are provided for personnel to have quick, centralized access to resources. Support for Email or SMS notification.
